Power BI Assignment 2 – DAX Calculations & Dashboard Insights

Project Title: E-Commerce Sales Analysis Using Power BI

Based on your 8 screenshots, here are professional headings, explanations, and key insights you can use in your assignment report, PDF, or GitHub README.

* Screenshot-wise headings and insights

* Screenshot 1: Total Sales Trend Analysis – Line Chart

* Explanation: This line chart displays total sales against Order Date.

Key Insights:

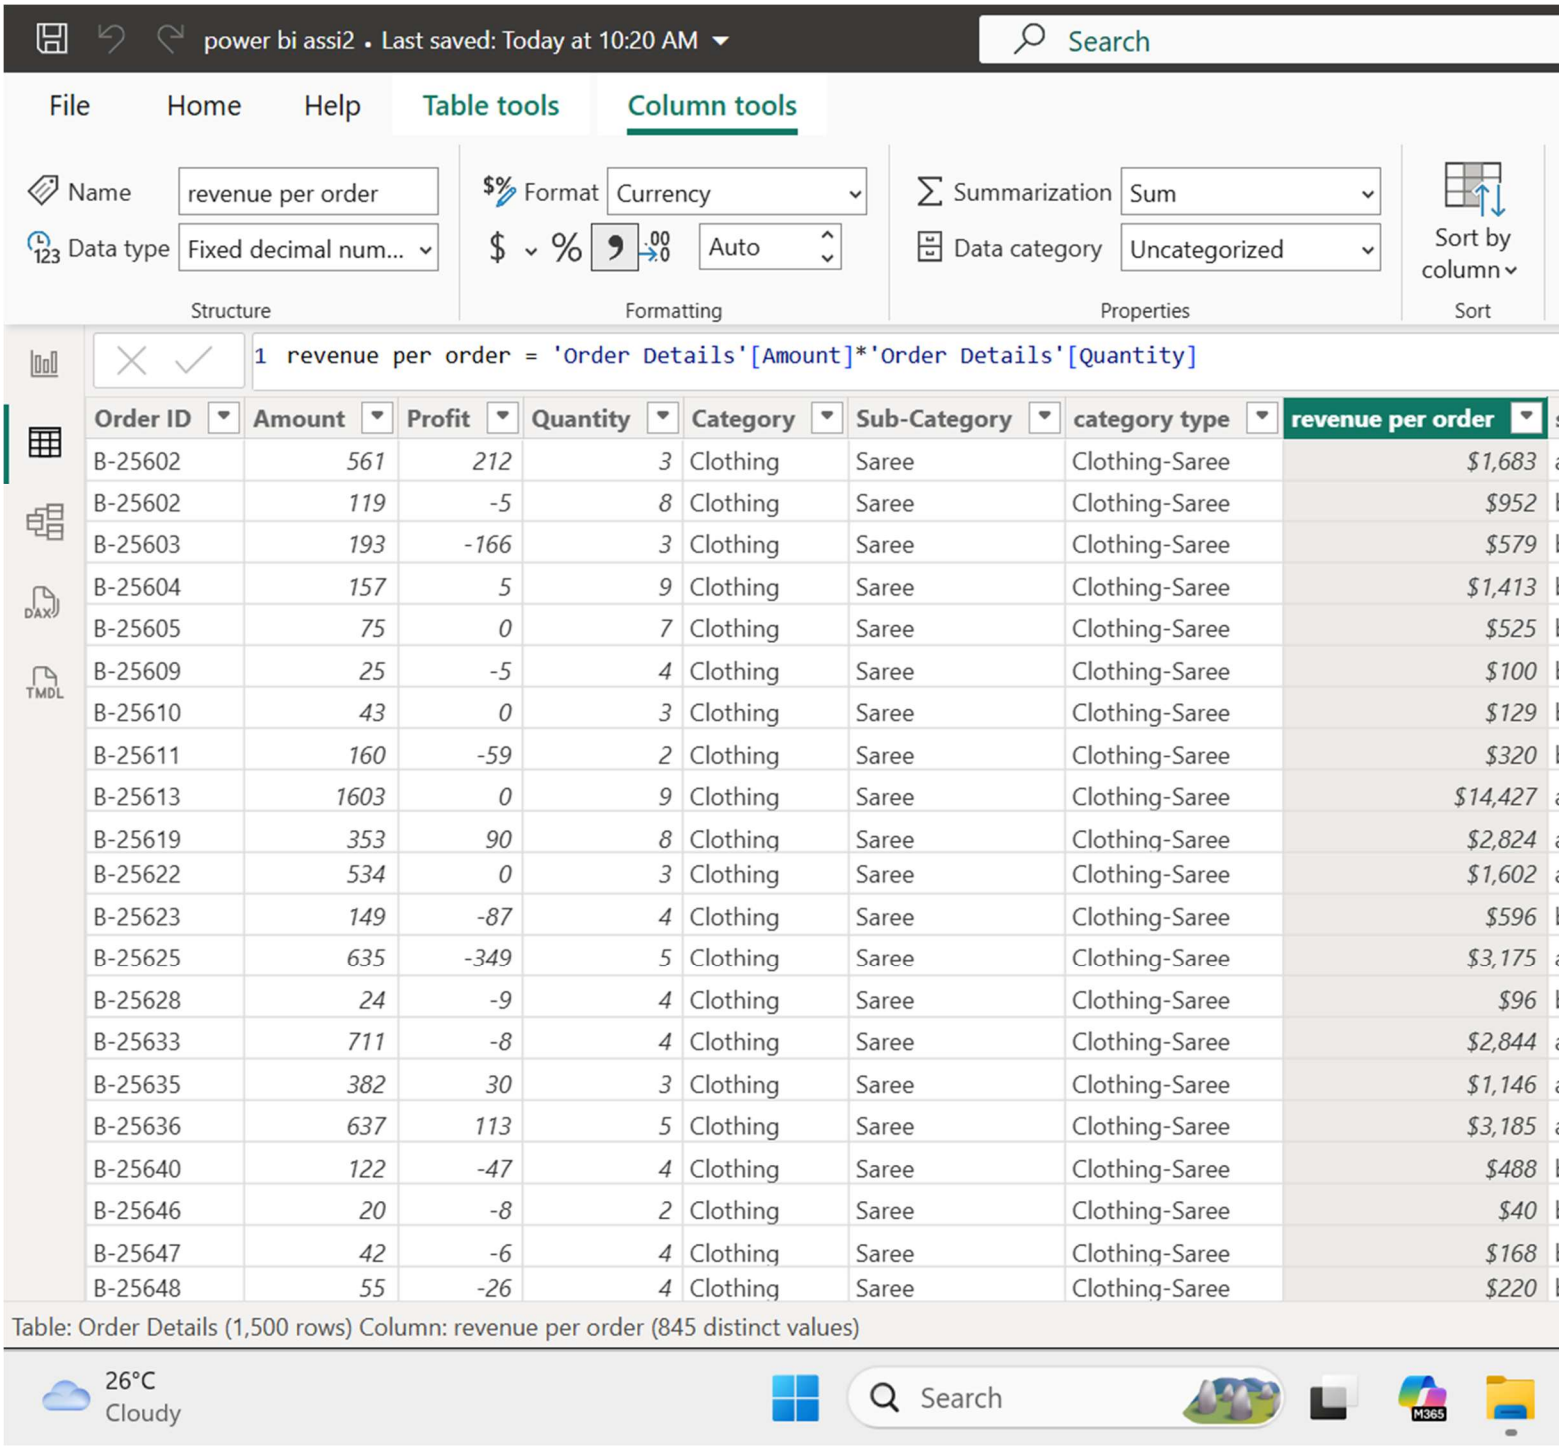

- The chart shows sales values ranging approximately from $3,200 to $13,500.
- The displayed sales values decrease sharply at first and then decline more gradually.
- The chart appears sorted by sales value rather than chronological order, so it cannot yet establish a genuine sales trend over time.

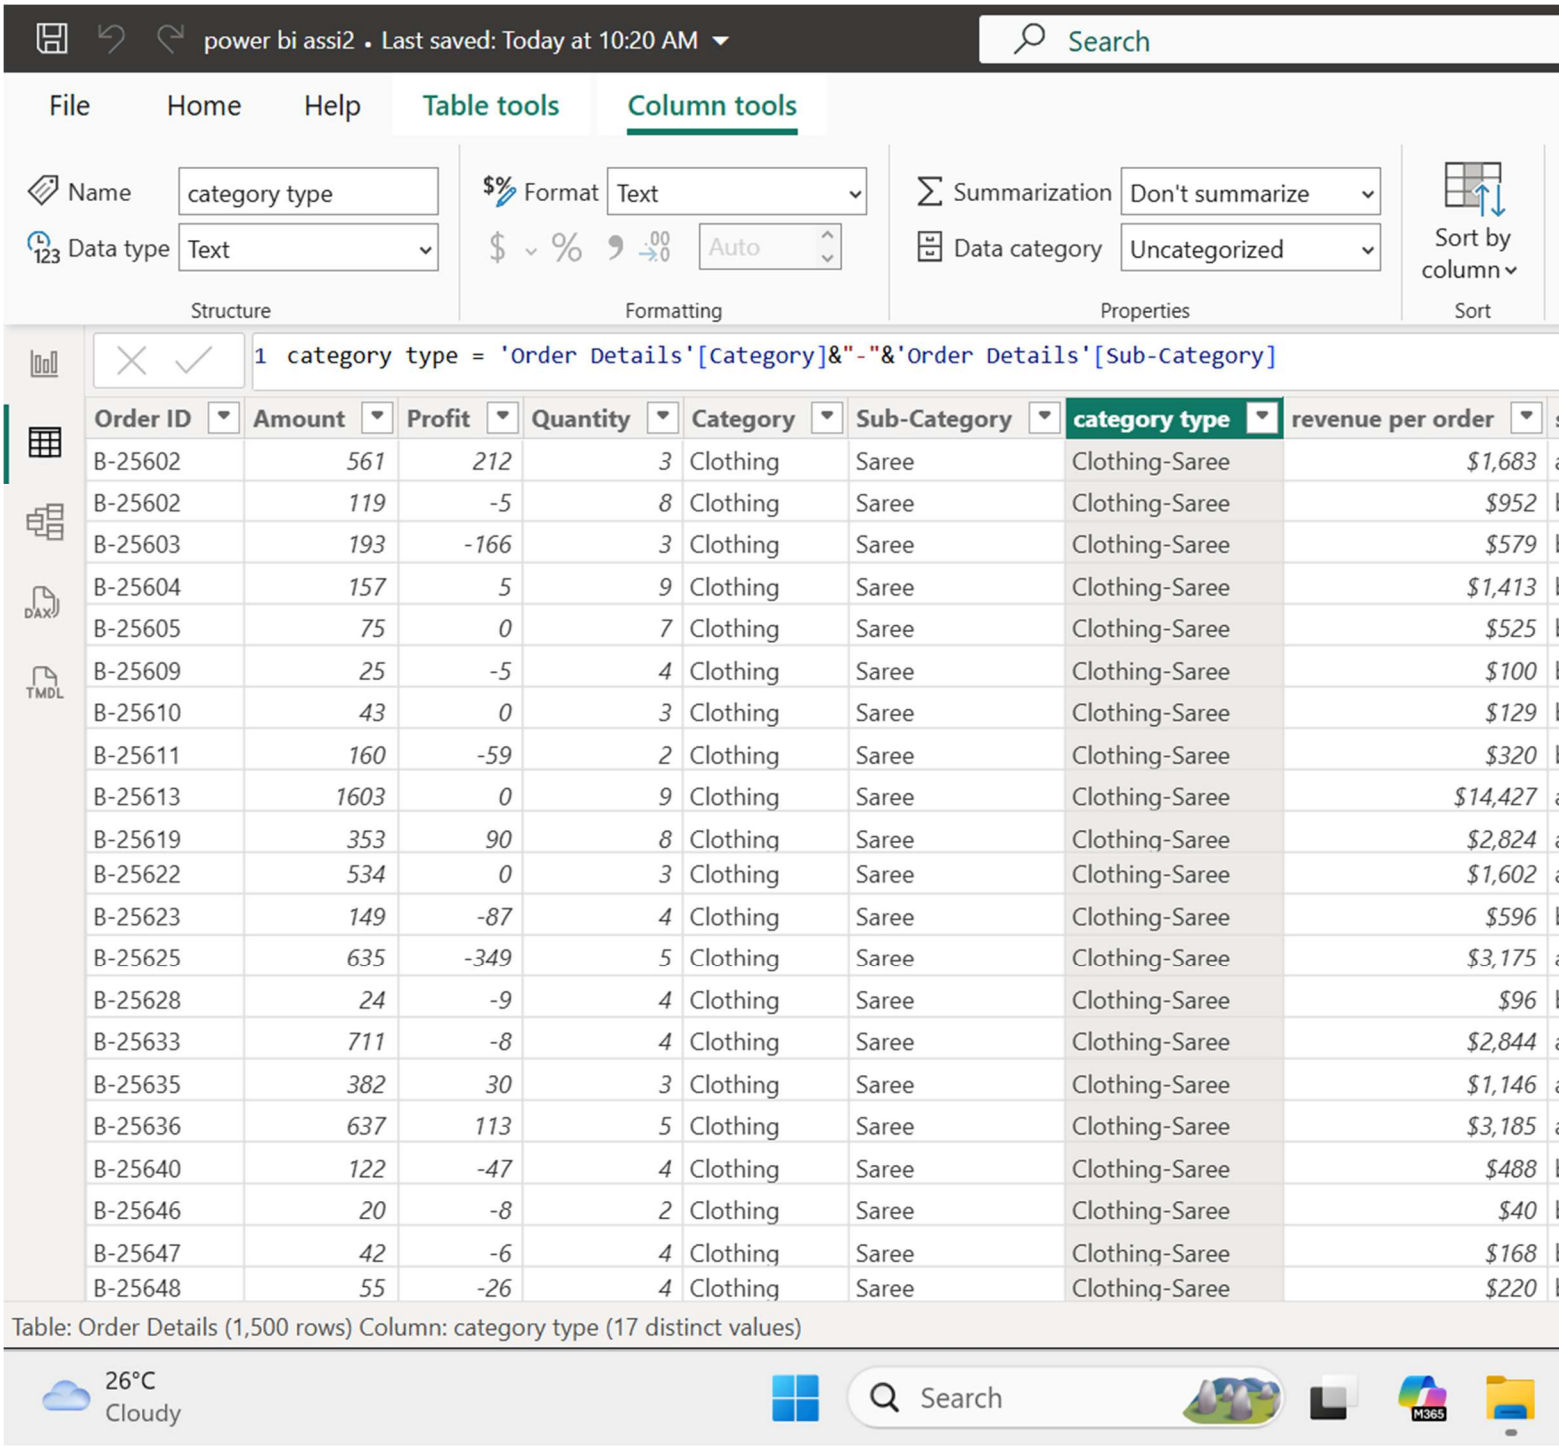

Recommendation: Sort Order Date in ascending chronological order and use monthly aggregation to analyze actual sales growth or decline.

Recommendation: Focus on understanding why order volumes differ between states and consider opportunities to improve sales in lower-volume regions.

Screenshot 4: Average Profit Analysis – Delhi

Explanation: A DAX measure has been created to calculate average profit for orders associated with Delhi.

Conclusion

The Power BI assignment demonstrates calculated columns, DAX measures, sales analysis, regional comparisons, and interactive visualizations.

The screenshots provide evidence of the calculations and charts created, although some visuals and calculations need refinement before final submission.
